Terms & Conditions

Your Harley-Davidson fuel sending unit rebuild includes full disassembly and glass blasting of the unit. Steel pickup and return lines will be replaced if needed. Any damaged wiring or rheostat components will be repaired or replaced.

Replacement rheostats, wiring, and sensors may differ slightly in appearance from factory components but will perform with accurate OEM function.

Exposed parts of most units are painted with a gray epoxy coating to help protect from corrosion and extend the life of your part.

Tri Starr LLC is not responsible for goods left over 30 days or loss due to fire or theft.

I have read and accept the above terms.
